## RESEARCH INTERESTS

My interest lies at the intersection of transportation and optimization. The problems are complicated due to the uncertainty in demand and supply. Uncertainty in demand arises due to interactions with multiple state-holders, including competitors, collaborators and customers. Uncertainty in supply arises due to delays and disruptions in resource availability. I use *Optimization models* to solve these decision making problems; *Data Analytic and Statistical Modeling*, *Machine Learning* to mimic stakeholder behavior; and simulations modeling to test the performance of proposed solution. Most of my research is focused on transportation problems and healthcare system, particularly in aviation area.
