## FIELD OF SPECIALIZATION

My research interest is large scale aviation operations optimization. The problems are complicated due to the uncertainty in demand and supply. Uncertainty in demand arises due to interactions with multiple state-holders, including competitors, collaborators and customers. Uncertainty in supply arises due to delays and disruptions in resource availability. By using emerging technologies and combined knowledge from operations research, economy and computer science, my research is to build the mathematical foundations for resource allocation, coupled with computational algorithm and empirical validation method. I use *Optimization models* to solve these decision making problems; *Data Analytic and Statistical Modeling, Machine Learning* to mimic stakeholder behavior; and simulations modeling to test the performance of proposed solution. Most of my research is focused on transportation problems and power system, with an emphasis on aviation area.
